Education

RV College of Engineering

Bachelor in Computer Science and Engineering (GPA: 9.22)

University of Illinois Urbana-Champaign

Master in Computer Science (Incoming Student)

Bengaluru, India

August 2023

Champaign, USA

August 2026

Work Experience

Qualcomm India Private Limited

Software Engineer

Bengaluru, India

January 2023 – July 2026

- Designed and delivered a production-ready SoC upgrade framework under tight deadlines and limited testing resources
- Optimized the data-relay mechanism, increasing Bluetooth throughput by 24% and reducing system load during upgrades
- Refactored core component of DFU module, delivering two major client releases on schedule and reducing integration defects while improving system robustness
- Introduced GenAI-based tools for log-analysis automation which reduced triage time, and creating code documentation

Epsilon Pvt Ltd

Software Engineering Intern

Bengaluru, India

August 2022 – January 2023

- Benchmarked HBase, Apache Phoenix and Solr for large-scale data retrieval and analytics, evaluating filtering, aggregation, and multi-condition queries across varying dataset sizes.
- Optimized database query performance through primary//secondary indexing, query restructuring, and selective column retrieval, reducing representative Phoenix query execution from 19.4s to 0.37s.
- Built and evaluated a distributed data-processing environment using Hadoop/HDFS, HBase, Phoenix, Solr, and Docker, analyzing performance across storage and query architectures and documented benchmarking results for large datasets.

Project Experience

Novel Biomarker Prediction for Lung Cancer Using Random Forest Classifier

- Evaluated multiple ML and ensemble algorithms on gene expression analysis data to detect NSCLC/SCLC causing genes, and Random Forest predict potential biomarkers. Optimized the model to achieve 0.93 AUC and 87% accuracy
- Published in Cancer Informatics. <https://journals.sagepub.com/doi/10.1177/11769351231167992>

Business Documents Data Recognition and Table Extraction using Deep Learning Techniques

- Integrated DETR-based table extraction and YoloV5 object detection, achieving mAP values of 84.36% and 80.92% across diverse business documents
- Presented at International Conference of Artificial Intelligence and Computing (ICAIC) 2025. <https://rdcu.be/wZSePwoXqLVa>

Conditional Independence Testing using RCoT

- Modified RCoT algorithm to run on high-performance computing systems (HPCC), reducing runtime by 50% using synthetic data
- Published in JAIT Journal. <http://www.jait.us/shw-229-1347-1.html>

Skills

Programming Languages: Python, Java, C/C++, SQL, Dart, R, Rust

Frameworks: ReactJS, NodeJS, Kotlin, Tensorflow, OpenSSL, Redis, PostgreSQL, SQLite, MongoDB

Tools: Jira, Git/Github, GCP, AWS, Shell Scripting, Jenkins, Perforce, Kubernetes, Terraform, Ansible

Machine Learning: CNN, RNN, LSTM BERT, Transformers, PyTorch, Keras, TensorFlow, Spacy, Langchain, GAN, VAE, RAG

Achievements

Won two hackathons with Blockchain News DAap - [Certificates](#)

Led the data-driven astronomy research division in RVCE's astrophysics club, Dhruva

Collaborated with multiple national and international companies: Samsung, LexisNexis, Epsilon, and SCII
